File permissions in Linux

Project description

Through Linux commands I can grant and remove permission to files and subdirectories. I can give authorization to a certain group while removing it for another group. In this project i am responsible for granting permissions/access to certain files and directory using key linux commands to accomplish these tasks.

Check file and directory details

To check permission for all files including hidden files I would be using the "ls -la" command. The output of my command indicates that there is one directory named drafts , one hidden file named .project_x.txt, and five other project files.

```
researcher2@5d738f0f927b:~/projects$ ls -la
total 32
drwxr-xr-x 3 researcher2 research_team 4096 Dec  2 15:27 .
drwxr-xr-x 3 researcher2 research_team 4096 Dec  2 15:27 ..
-rw--w---- 1 researcher2 research_team   46 Dec  2 15:27 .project_x.txt
drwx--x--- 2 researcher2 research_team 4096 Dec  2 15:27 drafts
-rw-rw-rw- 1 researcher2 research_team   46 Dec  2 15:27 project_k.txt
-rw-r----- 1 researcher2 research_team   46 Dec  2 15:27 project_m.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_r.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_t.txt
researcher2@5d738f0f927b:~/projects$
```

Describe the permissions string

Looking at the first line of the output file, it shows that
1. File type is d which is a directory
2. User 2nd-4th character has: read, write, and execute permission
3. Group 5th-7th character has: execute and read permission
4. Others 8th-10th character has: have execute permission

Change file permissions

```
-rw-rw-rw- 1 researcher2 research_team    46 Dec 11 03:06 project_k.txt
```

Needs to be modified according to policies to have write access removed.
To change permissions i will be using the "chmod" command followed by o-w projects_k.txt

```
researcher2@b6479ee0731c:~/projects$ chmod o-w project_k.txt
```

```
researcher2@5d738f0f927b:~/projects$ chmod o-w project_k.txt
researcher2@5d738f0f927b:~/projects$ ls -la
total 32
drwxr-xr-x 3 researcher2 research_team 4096 Dec  2 15:27 .
drwxr-xr-x 3 researcher2 research_team 4096 Dec  2 15:27 ..
-rw--w---- 1 researcher2 research_team   46 Dec  2 15:27 .project_x.txt
drwx--x--- 2 researcher2 research_team 4096 Dec  2 15:27 drafts
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_k.txt
-rw-r----- 1 researcher2 research_team   46 Dec  2 15:27 project_m.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_r.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_t.txt
researcher2@5d738f0f927b:~/projects$
```

Change file permissions on a hidden file

```
researcher2@b6479ee0731c:~/projects$ chmod u-w,g-w,g+r .project_x.txt
```

This is the command used to assign the appropriate permissions
u-w removes write permissions from the user, g-w removes write permissions from group and
g+r grants read permissions to group.

```
researcher2@3213bbc1d047:~/projects$ chmod u-w,g-w,g+r .project_x.txt
researcher2@3213bbc1d047:~/projects$ ls -la
total 32
drwxr-xr-x 3 researcher2 research_team 4096 Dec 20 15:36 .
drwxr-xr-x 3 researcher2 research_team 4096 Dec 20 15:36 ..
-r--r----- 1 researcher2 research_team   46 Dec 20 15:36 .project_x.txt
drwx--x--- 2 researcher2 research_team 4096 Dec 20 15:36 drafts
-rw-rw-rw- 1 researcher2 research_team   46 Dec 20 15:36 project_k.txt
-rw-r----- 1 researcher2 research_team   46 Dec 20 15:36 project_m.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec 20 15:36 project_r.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec 20 15:36 project_t.txt
researcher2@3213bbc1d047:~/projects$
```

Change directory permissions

```
researcher2@b6479ee0731c:~/projects$ chmod g-x drafts
```

Inputting g-x removes group permissions to execute in the drafts directory and thus completely removing access to the drafts directory from the group.

```
researcher2@5d738f0f927b:~/projects$ chmod g-x drafts
researcher2@5d738f0f927b:~/projects$ ls -la
total 32
drwxr-xr-x 3 researcher2 research_team 4096 Dec  2 15:27 .
drwxr-xr-x 3 researcher2 research_team 4096 Dec  2 15:27 ..
-r--r----- 1 researcher2 research_team   46 Dec  2 15:27 .project_x.txt
drwx------ 2 researcher2 research_team 4096 Dec  2 15:27 drafts
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_k.txt
-rw-r----- 1 researcher2 research_team   46 Dec  2 15:27 project_m.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_r.txt
-rw-rw-r-- 1 researcher2 research_team   46 Dec  2 15:27 project_t.txt
researcher2@5d738f0f927b:~/projects$
```

Summary

As a security analyst knowing the ins and outs of Linux is a very important key to being able to do my job properly. In this project I used key Linux commands to grant and revoke permissions to certain files and directories to match the level of authorization my organization wanted. Using the ls -la command to check for permissions for the directory. I then used the chmod command multiple times to change the permission to certain files and directories. This proves my ability to work with Linux and the BASH shell.
